

Driving decarbonization and digitalization. Together.

Internship - Automation and Process Engineering

Job description

Learn and support the team in short and medium term goals. Identify, assess, define and execute work flow optimization which can be applied but not limited to manufacturing and/or daily job management which are supportive of manufacturing. Generate and disseminate ideas from brain storming sessions across the factory site and clusters

In your new role you will:

- Work closely with all the members in the team to understand and **to give an outsider's perspective of the work** being done
- **Suggest areas/ways of improvement** in the pursuit to optimize the outcome (inclusive of cross functional brainstorming sessions, internal/external meetings and from production floor site walks)
- **Be a web for the team** which the intern is embedded into and also **a bridge between the functions** within the working organization

Internship learning outcomes:

- Understand and can clearly articulate the nature of Infineon's business, value drivers, responsibilities and vision for the future
- Understand and can clearly articulate the **experiences garnered from the work /projects** which have been assigned to the intern
- Utilize these experiences that can vitally contribute to the student being able to **apply it in tangible and intangible ways** to the intern's student life

Profile

You are best equipped for this task if you are/have:

- On track to attain Bachelor in Engineering
- An uncanny skill for the **management of stakeholders** as it will be key in this role
- **Methodological thinking** and **systematic approach** to problem solving

Why Us
