

Driving decarbonization and digitalization. Together.

Senior Engineer Information Technology Automation & Development

Job description

In the area of Service Management, Automation & Monitoring you will be involved in the design, implementation and operation of global services in our service management platform solutions. You can bring in your skills in development activities across services in a global team.

In your new role you will:

- Focus on the implementation of solutions through the entire lifecycle (design, build, run).
- Support the development and enhancement of automation & monitoring tools.
- Operate and configure applications on container platform, e.g. OpenShift

Profile

You are best equipped for this task if you have:

- A degree (Bachelor or Master) in Computer Science, Informatics or similar
- First experience in software development projects
- Experienced in .NET and Angular
- First experience in integration of various kind of systems (REST, web services, etc.)
- Experience in database- and reporting technologies e.g. MS SQL
- Container know-how in OpenShift (as an advantage)
- working according to agile methods like SCRUM (as an advantage)
- Good English skills

Why Us

#WeAreIn for driving decarbonization and digitalization.

As a global leader in semiconductor solutions in power systems and IoT, Infineon enables game-changing solutions for green and efficient energy, clean and safe mobility, as well as smart and secure IoT. Together, we drive innovation and customer success, while caring for our people and empowering them to reach ambitious goals. Be a part of making life easier, safer and greener.
