

Driving decarbonization and digitalization. Together.

Senior Project Manager Design Systems (f/m/div)

Job description

Ever wondered how all the new semiconductor technologies are finally enabled for IC design and production? We create so called 'Design Systems' and provide them to our colleagues worldwide - including all the building blocks which state-of-the-art IC development is based on. In order to coordinate the development, we need you as a Senior Project Manager Design System. You take over project responsibility for the development and maintenance of the components for a certain technology - covering steps from product idea to end of life. Our Project Management Career provides an attractive career opportunity for employees who focus on managing projects and functional leadership of project team members.

In your new role you will:

- **Manage and control the entire project life-cycle** for the respective technology platform
- **Apply project management methodology to coordinate the planning, target setting, execution and controlling** of projects, while keeping an eye on performance, quality, costs and risks
- **Have an overview and understanding** of the relevant functional inter-dependencies
- **Cooperate with various internal business lines partners** to assure proper, in-time delivery and adequate functionality
- **Steer effective communication, recognizing barriers to achieve agreement**
- **Establish and maintain reasonable efficiency metrics and reporting**

Profile

When working in a team you understand yourself as a team enabler, fostering the strengths of your team members and deploying them according to their competences within the team. You focus on efficient and respectful collaboration, while keeping the stakeholders at the core of your decision making and feeling committed to and keeping your promises to the customer.

You are best equipped for this task if you have:

- **A degree in Electrical Engineering, Microelectronics, Physics, Computer Science** or a related subject
- **Several years of work experience in the semiconductor business** - ideally in an R&D environment with insights into design/technology packages, design flows and methodologies or Electronic Design Automation (EDA)
- **Very good experience in project management** e.g. leading medium sized projects

- A good sense for **intercultural differences**
- Preferably a **Project Management Certification** like **IPMA** or **PMP**
- **Excellent English communication skills** – German language skills being a plus

Benefits

- **Munich:**

Why Us

Driving decarbonization and digitalization. Together.

Infineon designs, develops, manufactures, and markets a broad range of semiconductors and semiconductor-based solutions, focusing on key markets in the automotive, industrial, and consumer sectors. Its products range from standard components to special components for digital, analog, and mixed-signal applications to customer-specific solutions together with the appropriate software.

We are on a journey to create the best Infineon for everyone.

This means we embrace diversity and inclusion and welcome everyone for who they are. At Infineon, we offer a working environment characterized by trust, openness, respect and tolerance and are committed to give all applicants and employees equal opportunities. We base our recruiting decisions on the applicant´s experience and skills.

We look forward to receiving your resume, even if you do not entirely meet all the requirements of the job posting.

Please let your recruiter know if they need to pay special attention to something in order to enable your participation in the interview process.

[Click here](#) for more information about Diversity & Inclusion at Infineon.

The central R&D organization „**Design Enabling and Services**“ (**DES**) provides the design environments (design-systems) to the different product development teams at Infineon. With leading edge design methods, complex building blocks and a wide range of product development services DES enables Infineon's advanced IC development. This means the complete value creation chain from abstract system models down to the fully verified product layout which ensures high quality manufacturing readiness.
