

Driving decarbonization and digitalization. Together.

Senior Engineer - Digital Functional Verification

Job description

Are you up for a new challenge? We are currently seeking a Digital Functional Verification Engineer who will be responsible for ensuring the verification quality of IP and SoC modules. By executing verification tasks and test suites based on design specifications, you will play a crucial role in delivering digital systems that meet the highest standards of quality and reliability. This is a chance to put your skills and expertise to the test in an exciting and dynamic work environment.

In your new role you will:

- Be responsible for **verification quality of IP and SoC modules**
- **Execute verification tasks** and **test suites** based on design specification
- **Analyze simulation and regression results**
- Support and work closely with Digital Verification leads on **self-checking test benches** using modern verification techniques based on System Verilog and UVM methodology
- **Support Digital Verification leads** in defining new trends of verification methodologies and flows

Profile

You are best equipped for this task if you have:

- A degree in Electrical Engineering, Information Technology or comparable with focus on electronics
- **At least 2-3 years of work experience in digital verification within the semiconductor industry**
- Proven knowledge of **System Verilog and UVM, VHDL or Verilog** – Formal verification would be plus
- **Have good programming skills, e.g. in C++, Python or Perl, as well as good Linux skills**
- Fluent communication in English language

Why Us

Driving decarbonization and digitalization. Together.

Infineon designs, develops, manufactures, and markets a broad range of semiconductors and semiconductor-based solutions, focusing on key markets in the automotive, industrial, and consumer sectors. Its products range from standard
